

NUTRIENT DATA BANK AVAILABILITY
Donna L. Hay

The second session of the Pre-Conference addressed a review of the different nutrient data banks currently available for sale or rent. Information used in this presentation was volunteered by respondents to a nutrient data bank questionnaire. Twenty-eight data banks were compared across their major characteristics, including:

- Price (cost to buy or rent)
- Quantity basis of volume measurement (household units, 100 grams, as well as conversion capabilities)
- Number of food items (distinct items for which nutritional information is available) and their coding procedure
- Number of nutrients coded for each food item
- Sources of the nutritional food item profiles
- Documentation of source information, inadequate/incomplete data

A nutritional profile comparison summary was provided on both the total number of nutrient components and the major nutritional groupings of general, carbohydrates, protein, fat, vitamins and minerals.

This directory of specific information of the twenty-eight data banks was provided to all conference attendees. The accuracy or adequacy of any particular data bank is not guaranteed, rather the directory is meant to serve as an aid to potential data bank users in acquainting the user with options available in a readily accessible and easy-to-use form.
